

# SETH SOCHETRA

## Full-Stack & Mobile Developer

Vue.js · Flutter · Laravel · Supabase · Kotlin

Battambang, Cambodia | sochetra411@example.com | github.com/mrchetra007 | [Open to Opportunities](#)

### PROFILE SUMMARY

Self-driven full-stack and mobile developer currently in my final year of Information Technology at the National University of Battambang, Cambodia. I build complete, production-ready applications end-to-end — from database design to deployed UI — without half-finished demos or tutorial clones. I independently learned Vue.js, Flutter, Kotlin, Laravel, and Supabase by shipping real products, and I am comfortable building across web, mobile, and desktop platforms. I care about the details that make software feel polished, and I am actively looking for a junior developer role where I can contribute meaningfully and keep growing.

### EDUCATION

#### Bachelor of Information Technology

National University of Battambang · Year 4 (Final Year) · Cambodia

### TECHNICAL SKILLS

|                 |                                                                             |
|-----------------|-----------------------------------------------------------------------------|
| Frontend / Web  | Vue.js 3, JavaScript, HTML5, CSS3, Tailwind CSS, Inertia.js                 |
| Mobile          | Flutter (iOS & Android), Dart, Kotlin (Native Android)                      |
| Backend         | Laravel (PHP), REST APIs                                                    |
| Databases       | PostgreSQL (Supabase), Firebase Firestore & Realtime DB, SQLite, SQL Server |
| Payments & AI   | LemonSqueezy Payments, Google Gemini AI API                                 |
| Tools           | Git, GitHub, Vercel, Android Studio, VS Code                                |
| Systems / Other | C#, C++, Windows Forms                                                      |

### CAPABILITIES

- SaaS Architecture & Subscription Billing
- Real-time Systems (Firebase, Supabase)
- Cross-platform Mobile Engineering
- AI Integration (Gemini API)

- Payment Integration (LemonSqueezy)
- Role-Based Access Control (RBAC)
- QR Code Systems & Digital Ordering Flows
- RESTful API Design & Database Schema
- UI/UX Engineering & Responsive Design
- Simulation & Interactive Visualizations

## PROJECTS

---

### QRServe — QR Ordering System **LIVE** · [qrserve.vercel.app](#)

*Stack: Vue.js 3 · Supabase (PostgreSQL) · LemonSqueezy · Vercel*

A full-stack SaaS QR-code ordering platform for restaurants. Customers scan a table QR code to browse the menu and place orders in real time; restaurant owners manage everything through a live dashboard.

- QR-linked dynamic menus per table with real-time order management dashboard
- Online payments and subscription billing via LemonSqueezy
- Supabase Realtime subscriptions for instant live updates
- Multi-restaurant support architecture with scalable database design

### Science Lab — Physics Simulation App **PUBLISHED ON GOOGLE PLAY STORE**

*Stack: Flutter · Dart · Custom Physics Engine*

A mobile educational app that visualizes physics concepts through real-time interactive simulations. Users adjust parameters such as velocity, angle, and frequency and instantly observe results, making abstract physics intuitive for students.

- Projectile motion and wave behavior simulations with adjustable parameters
- Real-time physics calculations rendered with custom engine
- Published and live on Google Play Store

### Primary School Management System **IN DEVELOPMENT** · **PILOT PLANNED**

*Stack: Flutter · SQL · Supabase / Firebase*

A Khmer-first multi-school management platform built for Cambodian primary schools, designed for real-world deployment. Collaborated directly with school directors and teachers during development and testing.

- Teacher management, student records, and class management modules
- Role-based access control (RBAC) for admin, teacher, and staff roles
- Scalable multi-school database architecture designed for future expansion
- Freemium monetization with ads and Pro feature tiers

### Flora AI — Plant Identifier & Care Planner **COMPLETED**

*Stack: Flutter · Dart · Google Gemini API · SQLite*

A Flutter mobile app that uses Google Gemini AI to identify plant species from photos and generate a personalized 7-day care plan. All plant data and schedules are stored locally in SQLite for full offline access.

- AI-powered plant species identification via Gemini API
- Personalized 7-day care plan generation per identified plant
- Offline-capable with local SQLite storage for data and schedules
- Cross-platform: Android and iOS

### BankSim — Banking App Simulation **COMPLETED**

*Stack: Kotlin · Firebase Auth · Firebase Realtime Database · Android Studio*

A native Android banking simulation with real user accounts demonstrating peer-to-peer money transfers, QR code-based payments, and real-time balance updates.

- Real user accounts with unique bank numbers and Firebase Auth login
- Peer-to-peer money transfer and QR code-based payment flow
- Real-time balance updates via Firebase Realtime Database

### Inventory Management System **COMPLETED**

*Stack: Vue.js 3 · Laravel (PHP) · Inertia.js · MySQL*

A full-stack web application with server-side rendering via Inertia.js, a RESTful Laravel backend, and a Vue.js SPA frontend for complete inventory record management.

- Server-side rendering with Inertia.js for fast initial load
- Full CRUD for inventory records with authentication and session management
- RESTful Laravel backend with clean API architecture

### Flutter Chat / E-Commerce App **COMPLETED**

*Stack: Flutter · Dart · Firebase Auth · Cloud Firestore*

A real-time cross-platform application with user authentication and live messaging powered by Firestore, with seamless multi-user data sync across Android and iOS.

- Real-time chat and data sync via Cloud Firestore
- Firebase Auth for secure user authentication
- Cross-platform: Android and iOS

### E-Commerce CRUD System **COMPLETED**

*Stack: C# · SQL Server · Windows Forms · .NET*

A Windows desktop application for managing an e-commerce store's product catalog with full create, read, update, and delete functionality backed by a relational SQL Server database.

- Full CRUD product catalog management with data validation
- Relational SQL Server database design with product search and filtering

### Digital Clock App **COMPLETED**

*Stack: C++ · Standard Library*

A console-based digital clock demonstrating systems-level programming concepts including time manipulation, real-time display rendering, and efficient console I/O management.

- Real-time clock display with efficient refresh mechanism in C++

## STRENGTHS

---

- **Fast Learner** — Independently picked up Vue.js, Flutter, Kotlin, Laravel, and Supabase by building real products.
- **End-to-End Builder** — Consistently delivers complete, working software from database design to deployed UI.
- **Cross-Platform** — Comfortable building across web, mobile, desktop, and systems programming.
- **Problem Solver** — Breaks down complex technical challenges methodically into practical solutions.
- **Self-Starter** — Initiates and completes projects end-to-end without supervision.

## LANGUAGES

---

- Khmer — Native
- English — Conversational / Technical Reading
